MY NAME IS RISA AND I HAVE ACROMEGALY.

I went from being an extremely active endurance athlete and outdoor enthusiast, to barely being able to get out of bed. Initially, my doctor wouldn't listen, I wasn't being heard. So now, not only must my body heal, I must also heal my soul. I have a long road ahead of me and an uncertain future. I am learning to use my voice and I want to inspire and encourage others to use theirs.

My goal is to bring awareness to Pituitary Diseases, the earlier the diagnosis, the better. I will do this throughout my journey by sharing with all of those who will listen. Every pedal and every person counts. I pedal for us!

RARE DISEASE: Any disease, disorder, illness or condition affecting fewer than 200,000 people in the United States is considered rare. There are approximately 25,000 people in the US affected by Acromegaly today. It is believed that 1 in 5 people are walking around with a Pituitary tumor and many are unaware of it.
